

U-Value Calculations

What are U-Values?

A U-Value is the rate of transfer of heat through a thermal element e.g. a wall.

Why do I need a U-Value Calculation?

Calculated U-Values are a requirement of Building Regulations for both new buildings and work to existing buildings.

They may also be used for design flexibility when modelling potential improvements in energy assessments.

Who can help?

Members of Elmhurst Energy's U-Value Competency Scheme will have the required skills and knowledge to undertake U-Value calculations and help you achieve compliance with Building Regulations/ Standards.
